PKU-Stanford Joint Forum, 4-5 November 2016 Building World-Class Universities: An Institutional Perspective SESSION 2: institutional Contexts and Organizational Structure

# The World-Class Multiversity

#### Global Commonalities and National Characteristics

#### Simon Marginson

Professor of International Higher Education Director, ESRC/HEFCE Centre for Global Higher Education UCL Institute of Education, University College London, UK

## Coverage

- Remarks on method
- The context: bringing the state back in
- Can there be more than one kind of WCU?
- Worldwide higher education tendencies
- Worldwide structural forms and changes
- The rise of the Global Research Multiversity
- Size, shape and motor of institutions
- Conclusions

# Method

### Context: the state

# High citation papers, in top 10% of their research field, in mathematics and physical sciences, 2011-14 (Leiden data)

# Configurations of systems and institutions

- 1. The rise of the multiversity, the large comprehensive research university, to a more dominant role within national systems, advancing its global capacity, together with growth the size and scope of individual multiversities
- 2. Overall reduction (with some national exceptions) in the role of semi-horizontal binary sector distinctions and single-purpose institutions
- Growing internal diversity within the comprehensive multipurpose institutions
- 4. Steeper vertical stratification in many national systems

It is likely that there is an overall decline in diversity in the horizontal sense, with the (relatively peripheral) exception of on-line forms and in some countries, the growing role of for-profit private sectors

# The global multiversity president

"It is sometimes said that the American multiversity president is a two-faced character. That is not so. If he were, he could not survive. He is a many-faced character, in the sense that he must face in many directions at once while contriving to turn his back on no important group . . .

The university president in the United States is expected to be a friend of the students, a colleague of the faculty, a good fellow with the alumni, a sound administrator with the trustees, a good speaker with the public, an astute bargainer with the foundations and the federal agencies, a politician with the state legislature, a friend of industry, labor, and agriculture, a persuasive diplomat with donors, a champion of education generally, a supporter of the professions (particularly of law and medicine), a spokesman to the press, a scholar in his own right, a public servant at the state and national levels, a devotee of opera and football equally, a decent human being, a good husband and father, an active member of a church. Above all he must enjoy travelling in airplanes, eating his meals in public, and attending public ceremonies. No one can be all of these things. Some succeed at being none. He should be firm, yet gentle; sensitive to others, insensitive to himself; look to the past and future, yet be firmly planted in the present; both visionary and sound; affable, yet reflective; know the value of a dollar and realize ideas cannot be bought; inspiring in his vision yet cautious in what he does; a man of principle yet able to make a deal; a man with a broad perspective who will follow the details conscientiously; a good American but ready to criticize the status quo fearlessly; a seeker of truth where the truth may not hurt too much; a source of public policy pronouncements when they do not reflect on his own institution. He should sound like a mouse at home and look like a lion abroad. . . he is a marginal man but at the very center of the total process."

~ Clark Kerr, The Uses of the University, Harvard University Press, 1963, pp. 22-23.

# Size, shape and motor of WCUs

- Most WCUs strive for greater inclusion, size and reach, rather than de-bundling into separated markets
- Building social and global weight are ends in themselves.
  Both growth/accumulation and selectivity/concentration are sources of status. The inherent growth vs. selectivity tension continues, but at a higher level of size and scope than before
- A small minority of leading WCUs stay small
- Heterogeneous design: in more complex, multiple, loosely coupled organizational forms, WCUs remain coherent. This is facilitated in some systems by a shift from state administration to site governance in more corporate WCUs

### **Conclusions**

- Global systems and patterning in knowledge and information-related areas drive institutional adaptation and transformation: e.g. comparison and ranking, research and publication, disciplinary structures and research centres, commercial market in international education
- Nationally driven domains are also crucial (though their potency varies). They articulate the global system effects.
   National domains include inherited political cultures, stateuniversity relations, funding and tuition, governance, scope for WCU initiatives, academic career structures, etc
- Internationalization practices and mobility patterns develop in a dialectic of the global and national, e.g. open global borders vs. national migration and labour market policies
